Doctoral Program, SUNY Buffalo.

**Associate Professor and Director of the Accounting Research Center,
Columbia University.

USING THE ACCOUNTING RESEARCH DIRECTORY

1. INTRODUCTION

The role of the Accounting Doctoral Programs Conference is to identify ways in which the AAA can contribute more effectively to progress in doctoral level accounting education. This note is aimed as a supplement to the conference proceedings where faculty, researchers and doctoral students will learn usage features of the ACCOUNTING RESEARCH DIRECTORY [ARD] (Brown & Vasarhelyi, 1985).

Basic to this note is our belief that the ARD can be a major tool in the support of research and doctoral education in accounting. This note is divided into four major sections as follows: (1) Introduction, (2) The Structure of the ARD, (3) Using the ARD, and (4) Conclusions.

In this first section we attempt to link features of Accounting Doctoral Education to the ARD. In the second section the structure and features of the ARD are presented. In the third section a series of research related questions are addressed in terms of the ARD. In the conclusion, we discuss the pros and cons of the ARD's usage in Accounting Education, potential roles of the AAA in the support of efforts as the ARD, and other issues.

Most doctoral programs are composed of three major phases where the student: 1) is introduced to the major tools of research, 2) is introduced to key issues in accounting literature, and 3) performs original research aimed at dissertation completion.

The ARD will serve as a valuable supplement to this process, particularly in steps 2 and 3. In step 2, doctoral students may use the ARD primarily for literature surveys and preparation for the comprehensive exam. Here doctoral students will survey the Directory for areas of accounting research, rapidly bootstrap for references on particular topics, and search for important articles in the literature (e.g. often cited articles) in preparing for exams. In step 3 students will endeavor in the narrower scrutiny of dissertation related topics using the Directory on a more focused way. This step

allows for the identification of prior topic coverage, related issues, and potentially unexamined areas. The next section describes the features and composition of the ARD.

2. THE STRUCTURE OF THE ARD

The ARD is the product of two merged databases: 1) the taxonomic database (Vasarhelyi & Berk, 1984) which classifies the main body of the accounting literature into 10 different classifications and 2) the citation database (Brown & Gardner, 1985a) which examines citation frequency in major journals. It includes articles from five major Accounting Research Journals: (1) The Accounting Review (AR) since 1963, and (2) Journal of Accounting Research (JAR), (3) Accounting, Organizations and Society (AOS), (4) Journal of Accounting and Economics (JAE), and (5) Journal of Accounting, Auditing and Finance (JAAF) since their inception. In addition to all main articles from the above periods, a few notes and other features were included. In addition to all reference data the ARD also includes citation data (Brown & Gardner, 1985a, Brown & Gardner, 1985b) based on articles cited by four journal JAR, AR, AOS & JAE in the 1976 to 1984 period.

Figure 1 outlines the composition of the ARD. The first part is an alphabetical listing of authors with full bibliographic reference to all articles. The second part of the Directory breaks down the cited articles from the first part into classifications along four different dimensions for query. The articles are listed in decreasing order of citation.

The introduction of the ARD describes the content and objectives of the ARD as well as describes its usage.

3. USING THE ARD

This section illustrates potential uses of the ARD by doctoral students, faculty, and researchers for teaching and research. While the ARD has many potential uses, our purpose is simply to illustrate some its more obvious ones. The reader should refer to the specific Appendix that relate to the query in question. These Appendices are based on the 1984 prototype version of the book

Figure 1: ARD OUTLINE

2.2 Research Method
(Main Type of Methodology)

2.3 School of Thought
(Paradigm of Accounting Research)

2.4 Treatment
(Accounting Topic Focused)

forthcoming in 1985.

3.1. FINDING AN ARTICLE BY A KNOWN AUTHOR

Appendix I displays three pages of the first part of the ARD. To find an article by "Albrecht" the user would simply look it up alphabetically in the first part of the Directory. From the two "Albrecht" entries one is single authored and the other multi-authored. The latter could also be found under the name of the coauthors.

3.2. FINDING AN ARTICLE ON A PARTICULAR SUBJECT

Treatments (accounting subjects) are broken down into four major categories: 100-199. Financial Accounting Method; 200-299. Auditing; 300-399. Managerial Accounting Issues; and 400-499. Other Topics.

If the reader sought articles on inventory methods (e.g. FIFO vs LIFO), the treatment section (as shown in Appendix V) could be examined for inventory. Under this topic three articles by Sunder are most often quoted. Other articles with a citation index of 1.0 are Ricks (FL 82 JAR), R.Brown (SP

80 JAR), and Biddle (ST 80 JAR). The citation index (CITAIND) is defined as the total number of citations for the article normalized by the number of years since the article's publication or nine whichever is smaller.

3.3. FINDING AN ARTICLE THAT USES A CERTAIN METHODOLOGY

The research method taxonomization can be used to identify articles that used a particular methodology. Appendix III displays a page of articles that used the analytical internal logic method which includes much "a priori" research.

3.4. FINDING AN ARTICLE THAT USES A CERTAIN METHOD ON A PARTICULAR SUBJECT

In order to find double attributes like empirical studies on inventory items two categories must be compared and common items identified. Clearly such an effort is fastidious and could be better performed on a computer database "double-key" oriented search. Unfortunately on a paper medium this cannot be done. On the other hand the comparison of two alphabetized lists of authors is a minor effort compared with the examination of the articles for topic and method.

3.5. FINDING AN ARTICLE THAT

The Directory can be used directly to find articles that: 1) use a particular statistical method, 2) adopt certain methodology, 3) pertain to a specific paradigm, and 4) deal with an accounting topic. Further illustration would be tedious within the current context.

3.6. PREPARING A COURSE OUTLINE

Course outlines are tedious and laborious endeavors for accounting instructors. Often recent articles are ignored due to lack of awareness of their importance by the instructor. Accounting topic (treatment) and publication date are valuable items in outline updating. (See Appendix V)

3.7. DECREASING THE COST OF A PRE-DISSERTATION LITERATURE SEARCH

Doctoral students often spend substantial time searching through the literature for articles on a certain topic or method. The ARD is certainly not a replacement for thorough reading of articles but helps to increase the focus of a literature search as well as to avoid major omissions by the researcher. These oversights (not mentioning an often cited article) can be pinpointed by examining the first several papers under any topic of Part 2 of the ARD.

3.8. FINDING INCORRECTLY REFERENCED PAPERS

Despite all efforts of authors, referees, and editors, articles are often incorrectly referenced and identified. Papers that were in working paper form at the time of a publication turn into accepted and published papers at a later date and must be properly referenced. Part 1 of the ARD is useful for providing correct references to papers.

3.9. OTHER USES

Other potential uses of the ARD include: 1) preparing supplementary readings lists, 2) preparing bibliographies for a paper, 3) scanning the literature for research ideas, 4) identifying seldom considered topics, and 5) identifying over and under-researched areas.

4. CONCLUSIONS

This note illustrates a few of the potential uses of the ARD. Despite its great value for research and teaching support purposes the Directory has its shortcomings and may be incorrectly used. Some of these caveats are now discussed.

4.1. CAVEATS

The Directory was not designed for evaluating research output or scholarly productivity. Such an attempt would result in unfair and inadequate evaluations as: 1) the Directory is limited in scope, 2) quality scholarly work is often interdisciplinary, appearing in journals of other disciplines, 3) citation counts are affected by the rate of growth of the subarea in question, 4) articles may often take some time to be discovered due to being "ahead of their time" or they deal with topics that become important at a later date, 5) frequency of publication and article length are poor surrogates for measuring scholarly quality.
