IMPLEMENTING CONTINUOUS AUDIT FACILITIES FOR SMALL AND MEDIUM BUSINESSES

Presented by Greg Frazier, CPA.CITP

- The Internet
- Database Event Triggers

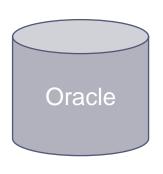

- User runs the report daily, weekly, monthly
- User runs the report on demand
- Application automatically runs every 10 seconds (continuous polling)

Database events:

- Add record to table
- Modify record to table
- Delete record from table

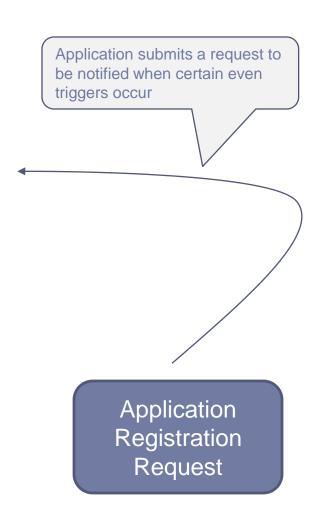

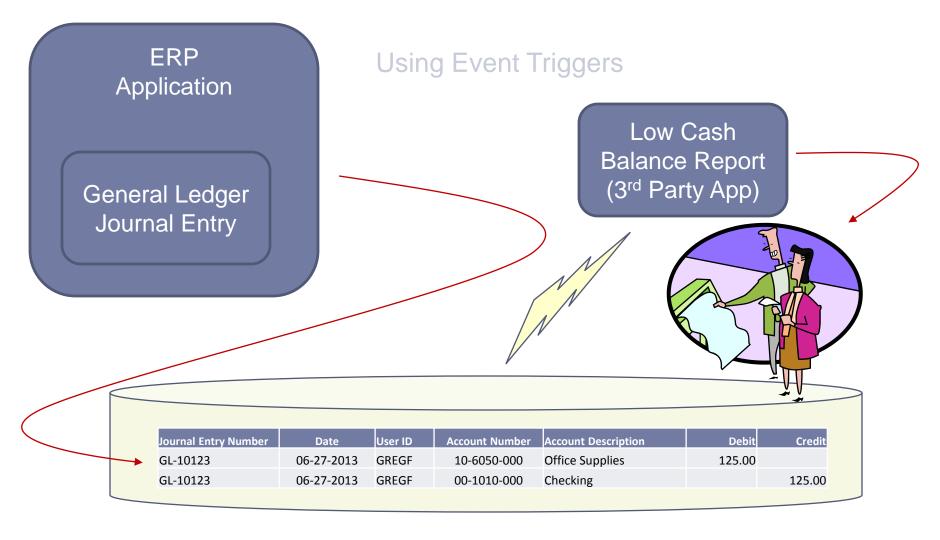

Registered 3rd Party Apps:

- Database procedures
- ERP modules
- 3rd party dictionaries
- 3rd party applications

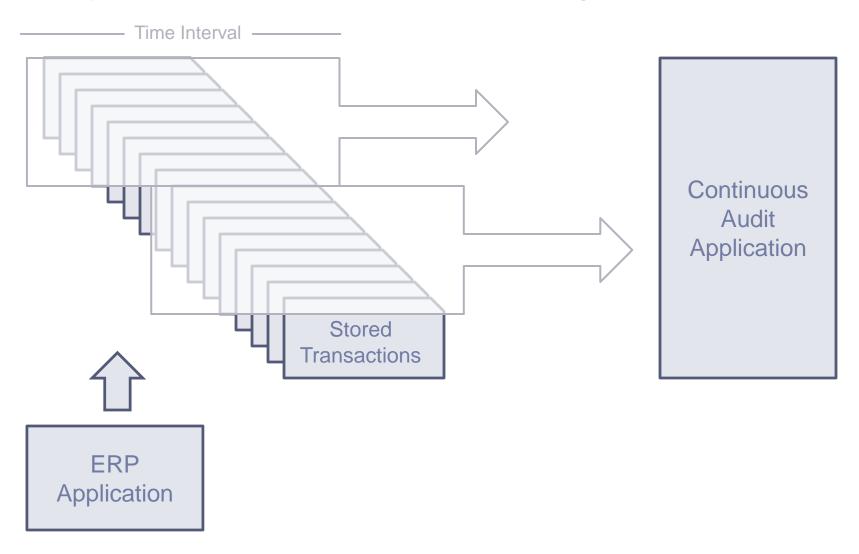

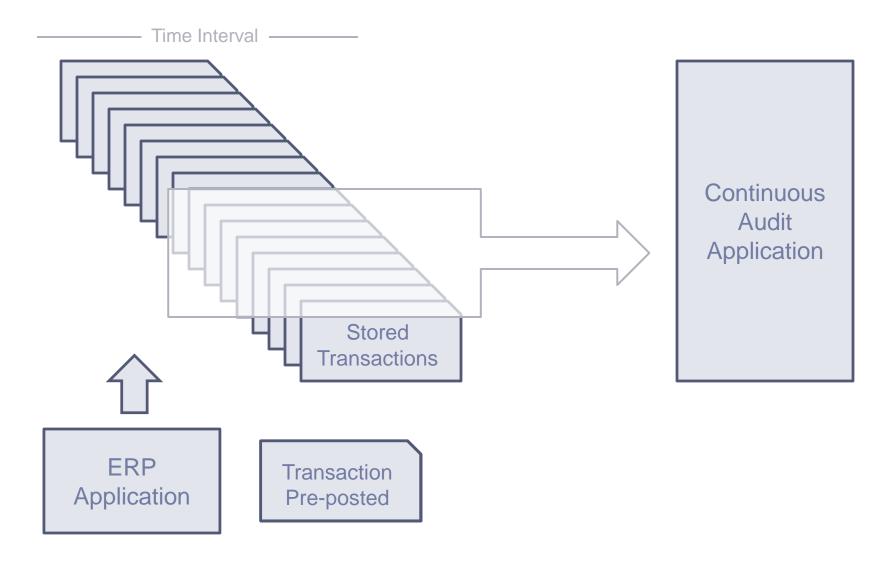

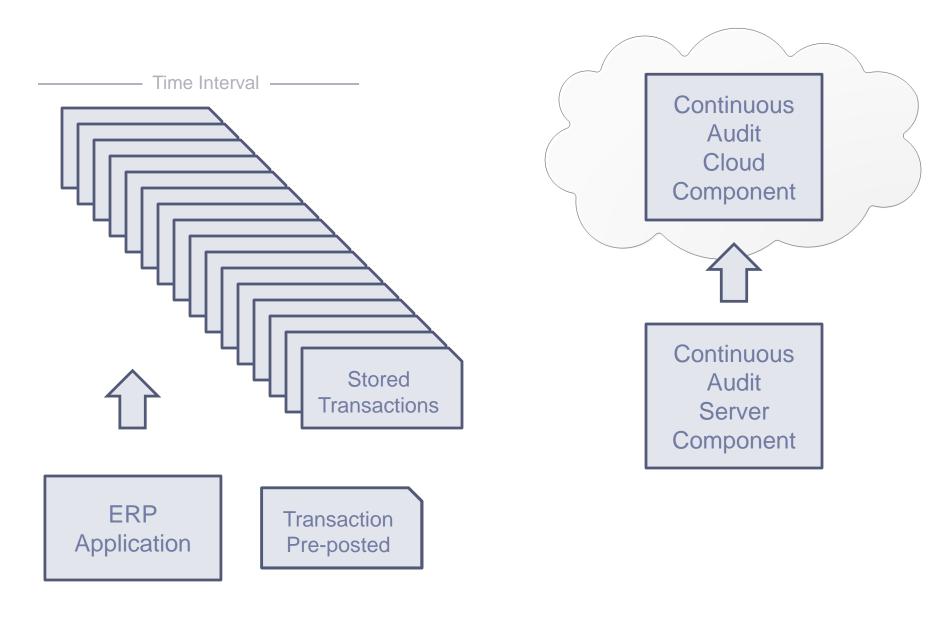

Application is notified when any add, update and delete events occur

Widely accepted view of continuous audit processing – Time interval based

Alternative approach to continuous audit processing – Transaction based

Alternative approach to continuous audit processing – Transaction based

number subject to the exception is 000-1100-00.

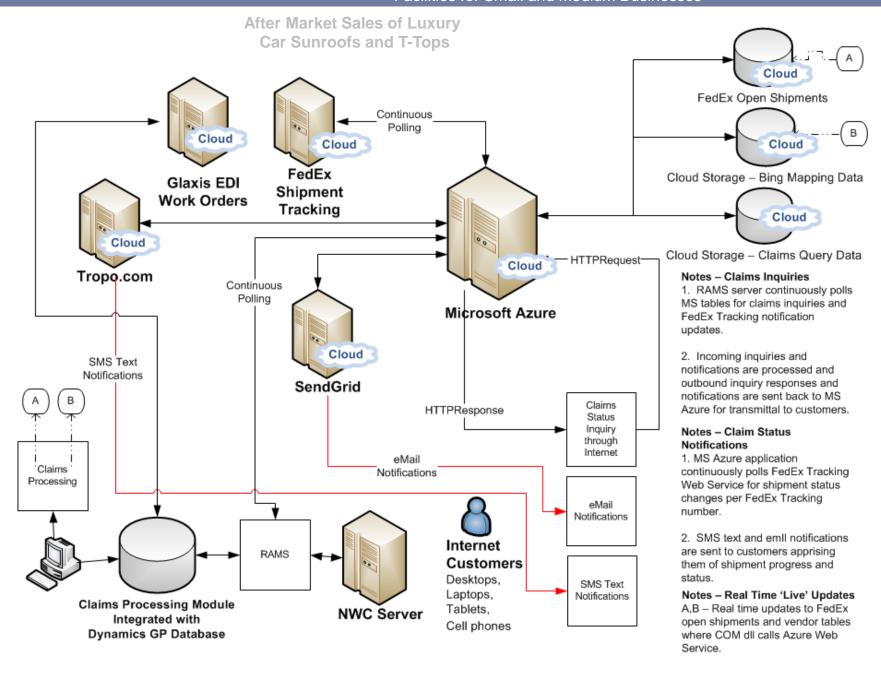

Reportable Condition: Transaction posted to a prior month

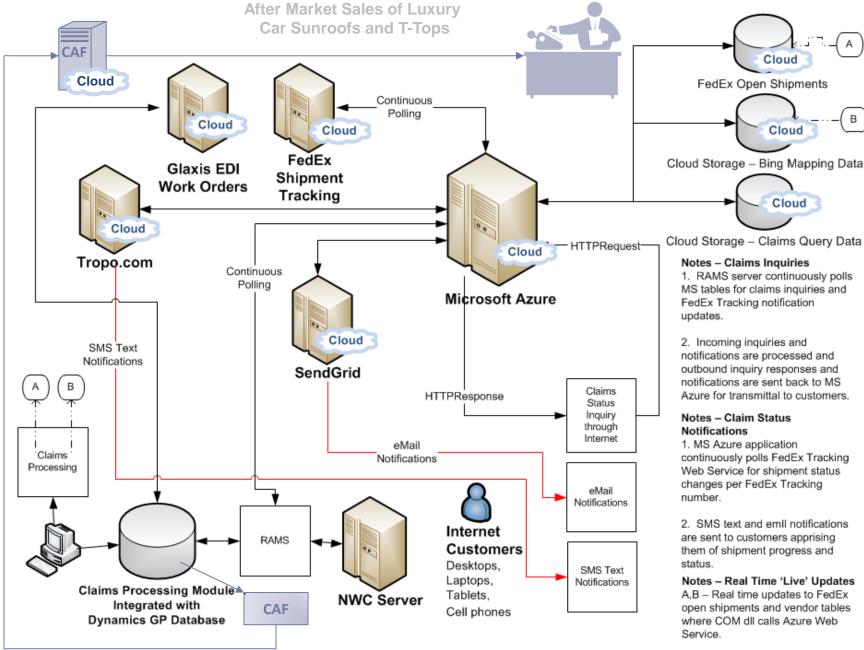

the entity's fiscal year.. The general ledger account number subject to the exception is 000-1100-00.

An example of an actual detective control report emailed from a continuous audit application

This journal entry contains a questionable posting to a prior month and may be subject to reversing or adjusting journal entries prior to the close of

Continuous audit facility evaluates AP aging each time a credit transaction is posted to the AP control account.

Benefits

- Faster detective reports
- Smaller footprint in auditee's environment
- Less costly than traditional audit approach

Drawbacks

- Limited ability to analyze transactions in aggregate
- High reliance on auditee's IT environment
- High reliance on 3rd party IT resources
