

The background of the slide features a large, semi-transparent watermark of the Rutgers University seal. The seal is circular and contains the text 'RUTGERS UNIVERSITY' around the perimeter. In the center, there is a sunburst design with rays emanating from a central point. The watermark is rendered in a dark red color, matching the overall theme of the slide.

The background of the slide features a large, semi-transparent watermark of the Rutgers University seal. The seal is circular and contains the text 'RUTGERS UNIVERSITY' around the perimeter and 'THE STATE UNIVERSITY OF NEW JERSEY' around the inner edge. The seal is centered and slightly faded, serving as a background for the text.

## Measuring the Degree of CA Adoption

- We have developed an “Audit Maturity Model” that corresponds to the Technology Adoption Lifecycle model of Bohlen et al (1957) and Rogers (1962).
- Our model emphasizes on how products and markets change as the technology becomes more refined and widely adopted.

The Rogers' Product Life Cycle Curve

## The Audit Maturity Model

# **The CarLab**

Continuous Audit and Reporting Laboratory  
Graduate School of Management  
Rutgers University

# AAA impact of research taskforce 2009

- Perhaps the most important contribution of accounting information systems research to practice in the auditing and assurance domain is in continuous assurance. The work of Vasarhelyi and his colleagues on continuous assurance demonstrates the application of strong theoretical foundations to the practical problems of the auditor; in this case the internal auditor.

- Rule based outlier detection
- Audit Data Standard (with AICPA/ASEC)

# **Continuous Process Auditing at AT&T (1986-1991)**

## CPAS definition

- The Continuous Process Audit System (CPAS) approach can be defined as a philosophy of auditing that aims to monitor key corporate processes on a continuous basis, in order to achieve audit by exception.

## CPAS &

- This is the nature, timing, procedures and effort involved in audit work.

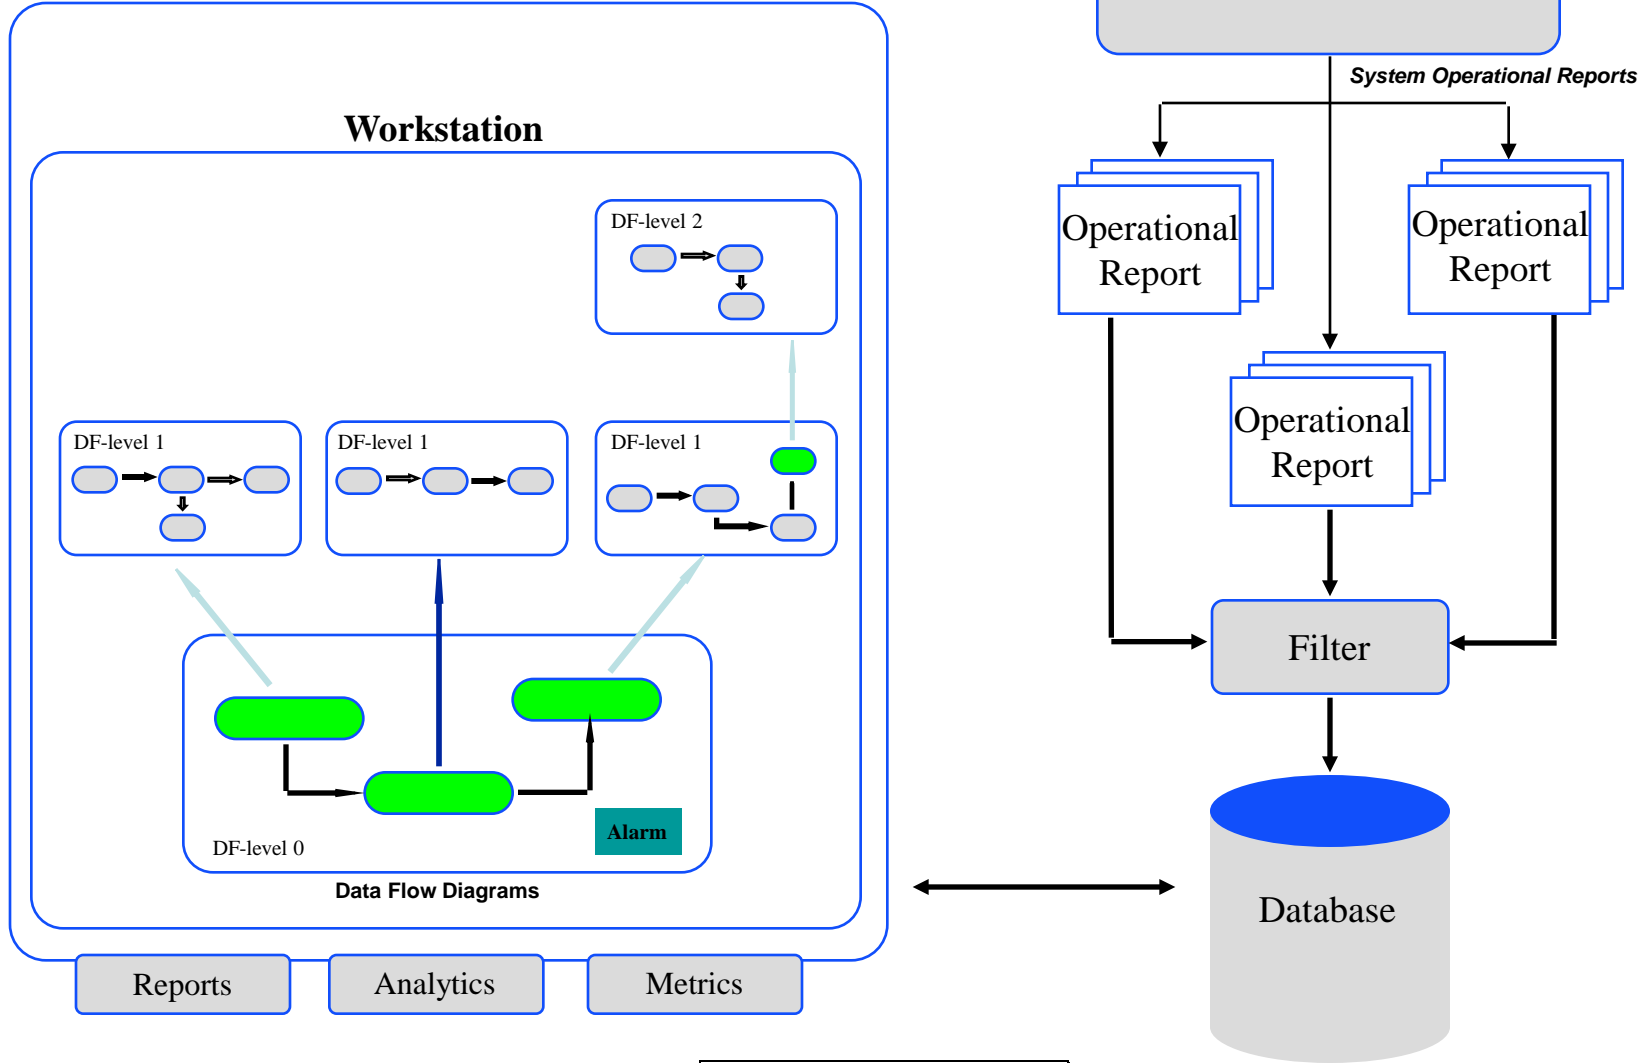

Follow the life cycle & data

Advanced analytics linked to processes, data rich, new methods

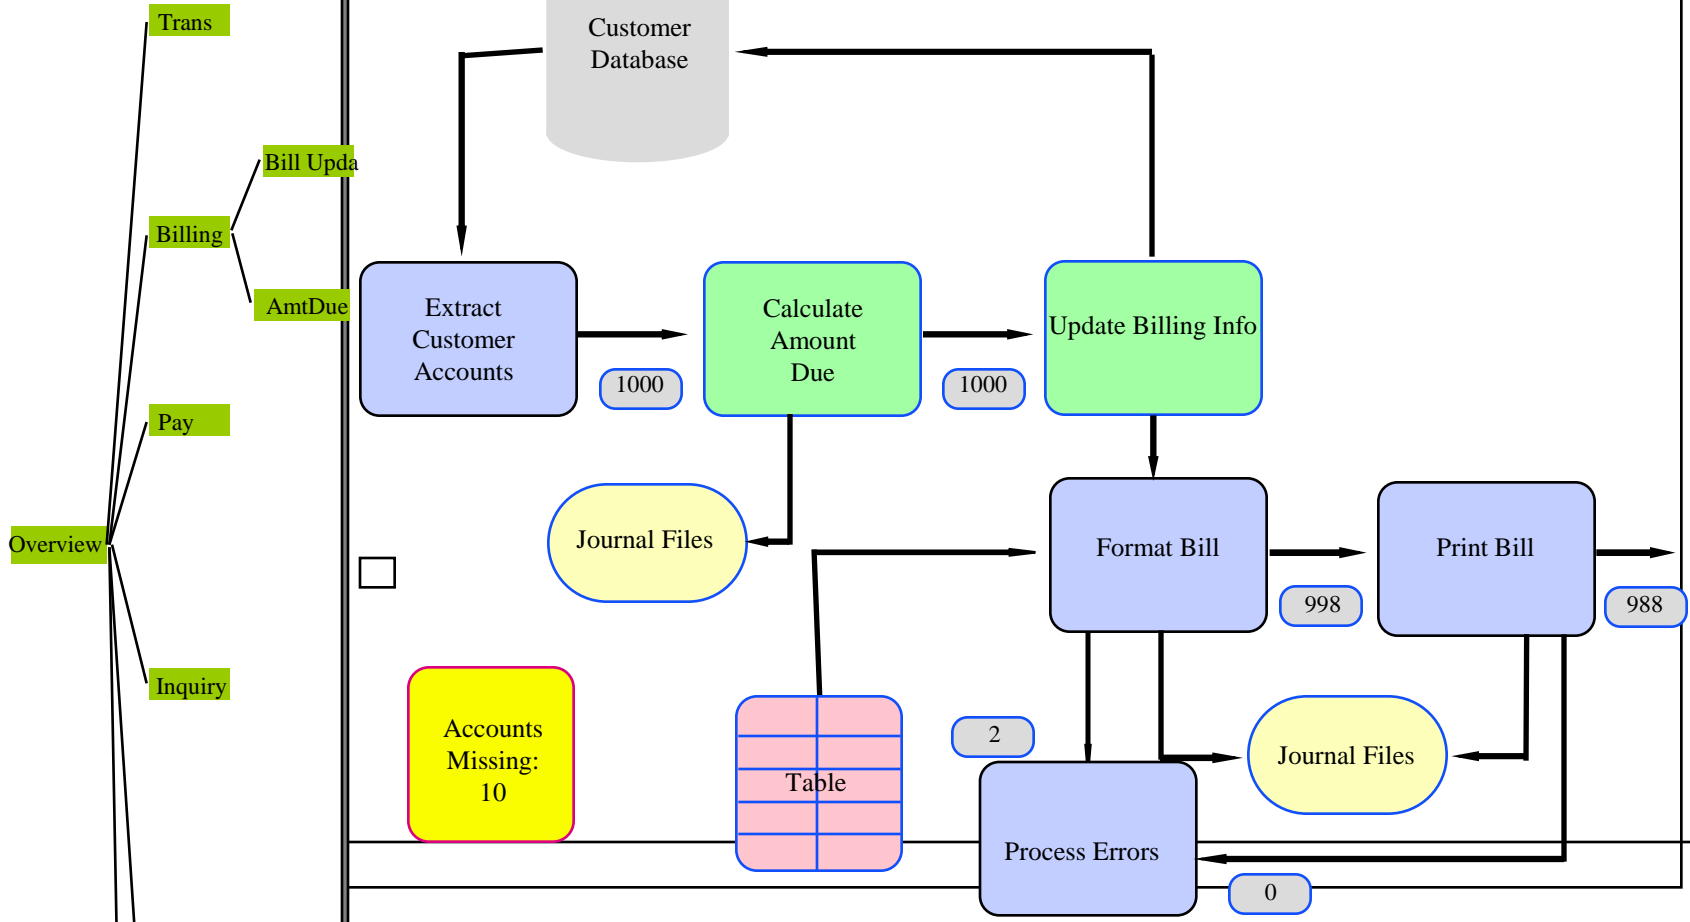

Alerts, Causal linkage, Confirmatory extranets, CRMA

Audit by exception

## CPAS OVERVIEW

Inquiry

Errors

# CPAS Changed Role of Auditor

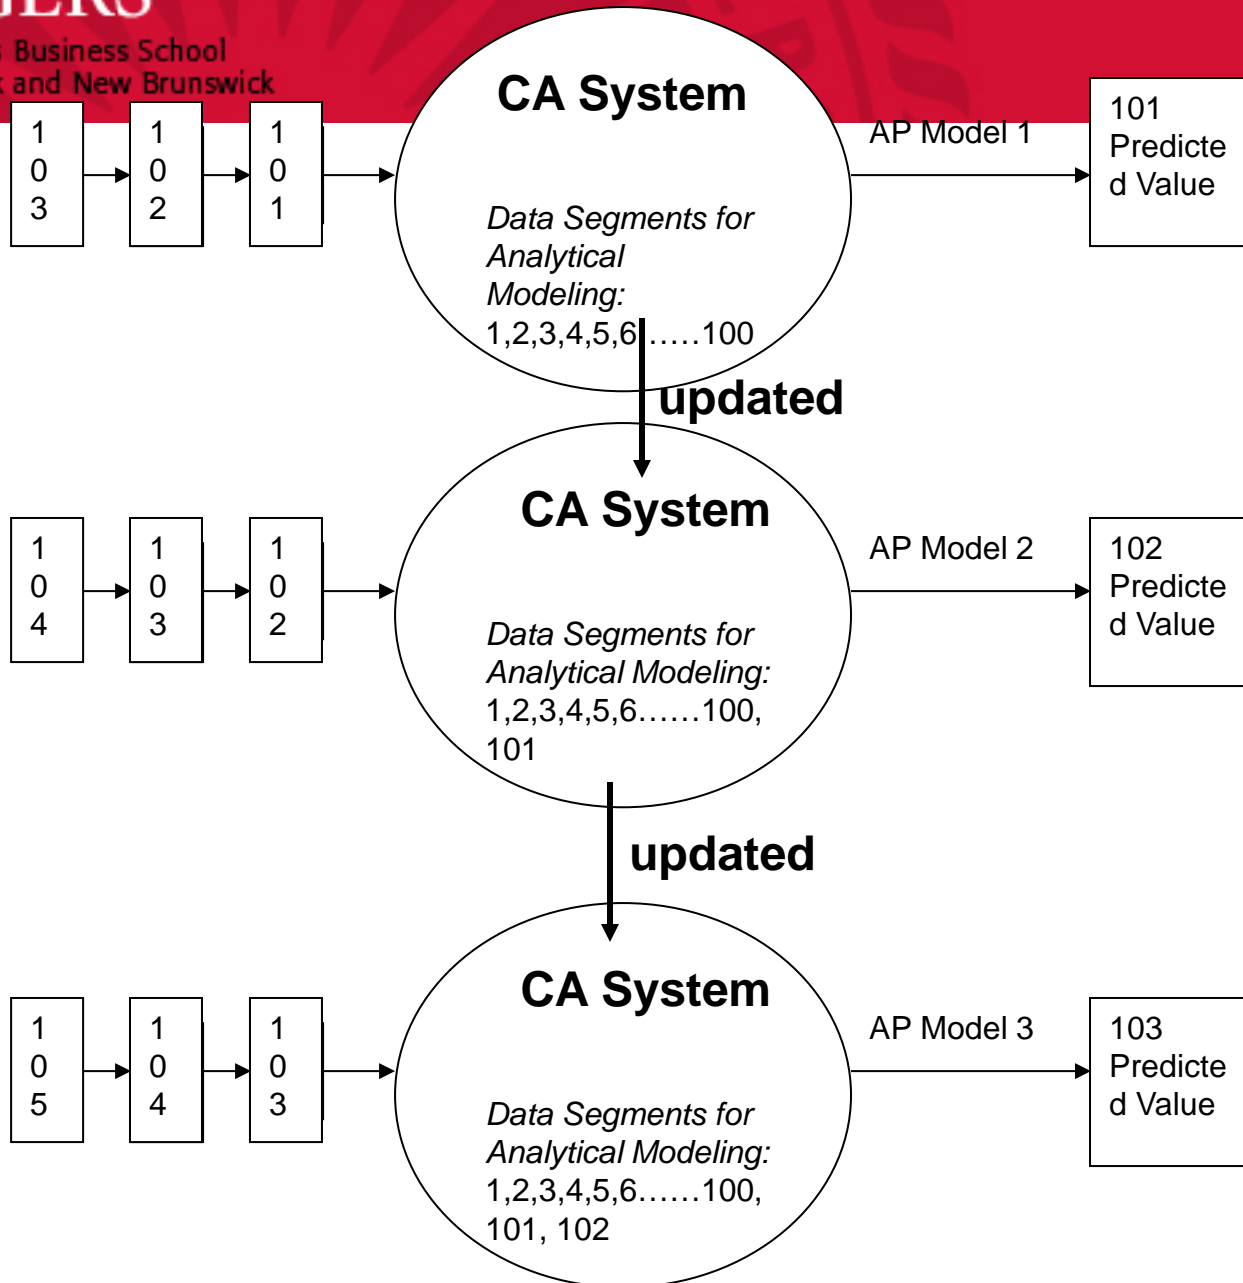

- The auditor will place an increased level of reliance on the evaluation of flow data (while accounting operations are being performed) instead of evidence from related activities (e.g. preparedness audits).
- Audit work would be focused on audit by exception with the system gathering knowledge exceptions on a continuous basis.

# Process mining

Mieke Jens (Hasselt University)

Michael Alles (Rutgers Univ.)

# What is Process Mining of Event Logs?

- *The basic idea of process mining is to extract knowledge from **event logs** recorded by an information system. Until recently, the information in these event logs was rarely used to analyze the underlying processes. Process mining aims at improving this by providing techniques and tools for discovering process, control, data, organizational, and social structures from event logs. Fuelled by the omnipresence of event logs in transactional information systems... process mining has become a vivid research area.*
- <http://is.tm.tue.nl/staff/wvdaalst/BPMcenter/process%20mining.htm>

## An Example of An Event Log of an Invoice

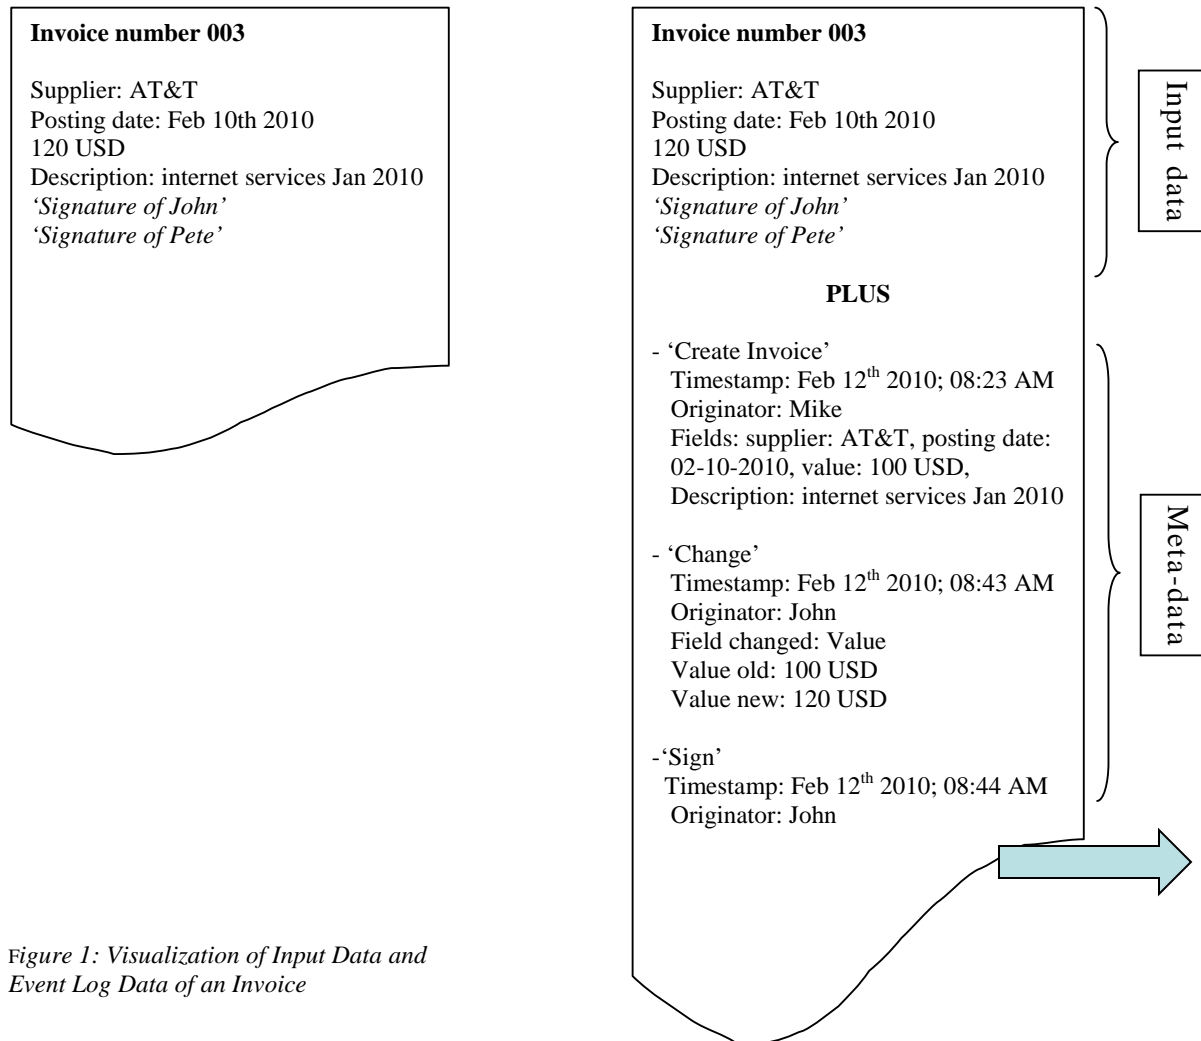

Figure 1: Visualization of Input Data and Event Log Data of an Invoice

# **PREDICTIVE AUDIT: TRANSACTION STATUS PREDICTION**

# Predictive Audit

- A predictive audit could help auditors and management to block a problem before it spreads.
- It is better to look forward than just look back at the historical information
- Continuous audit is used to monitor present transactions
- Can we use CA to predict the future?
  - Audit by exception
  - Alarm and warning system

# Results and analysis

- Models comparison of cost-sensitive approach

- 1:14 ratio

- 1:16 ratio

Model/ Measurements	Accuracy	False negative rate	False positive rate
J48	0.64	0.48	0.35
Logistic regression	0.70	0.50	0.28
Support vector machine	0.79	0.63	0.18

Accuracy	False negative rate	False positive rate
0.53	0.36	0.48
0.57	0.39	0.44
0.73	0.56	0.25

# Conclusion

- Predictive audit lets auditors monitor and audit controls in a preventive basis.
- The result of prediction model could alert auditors for suspicious transactions.

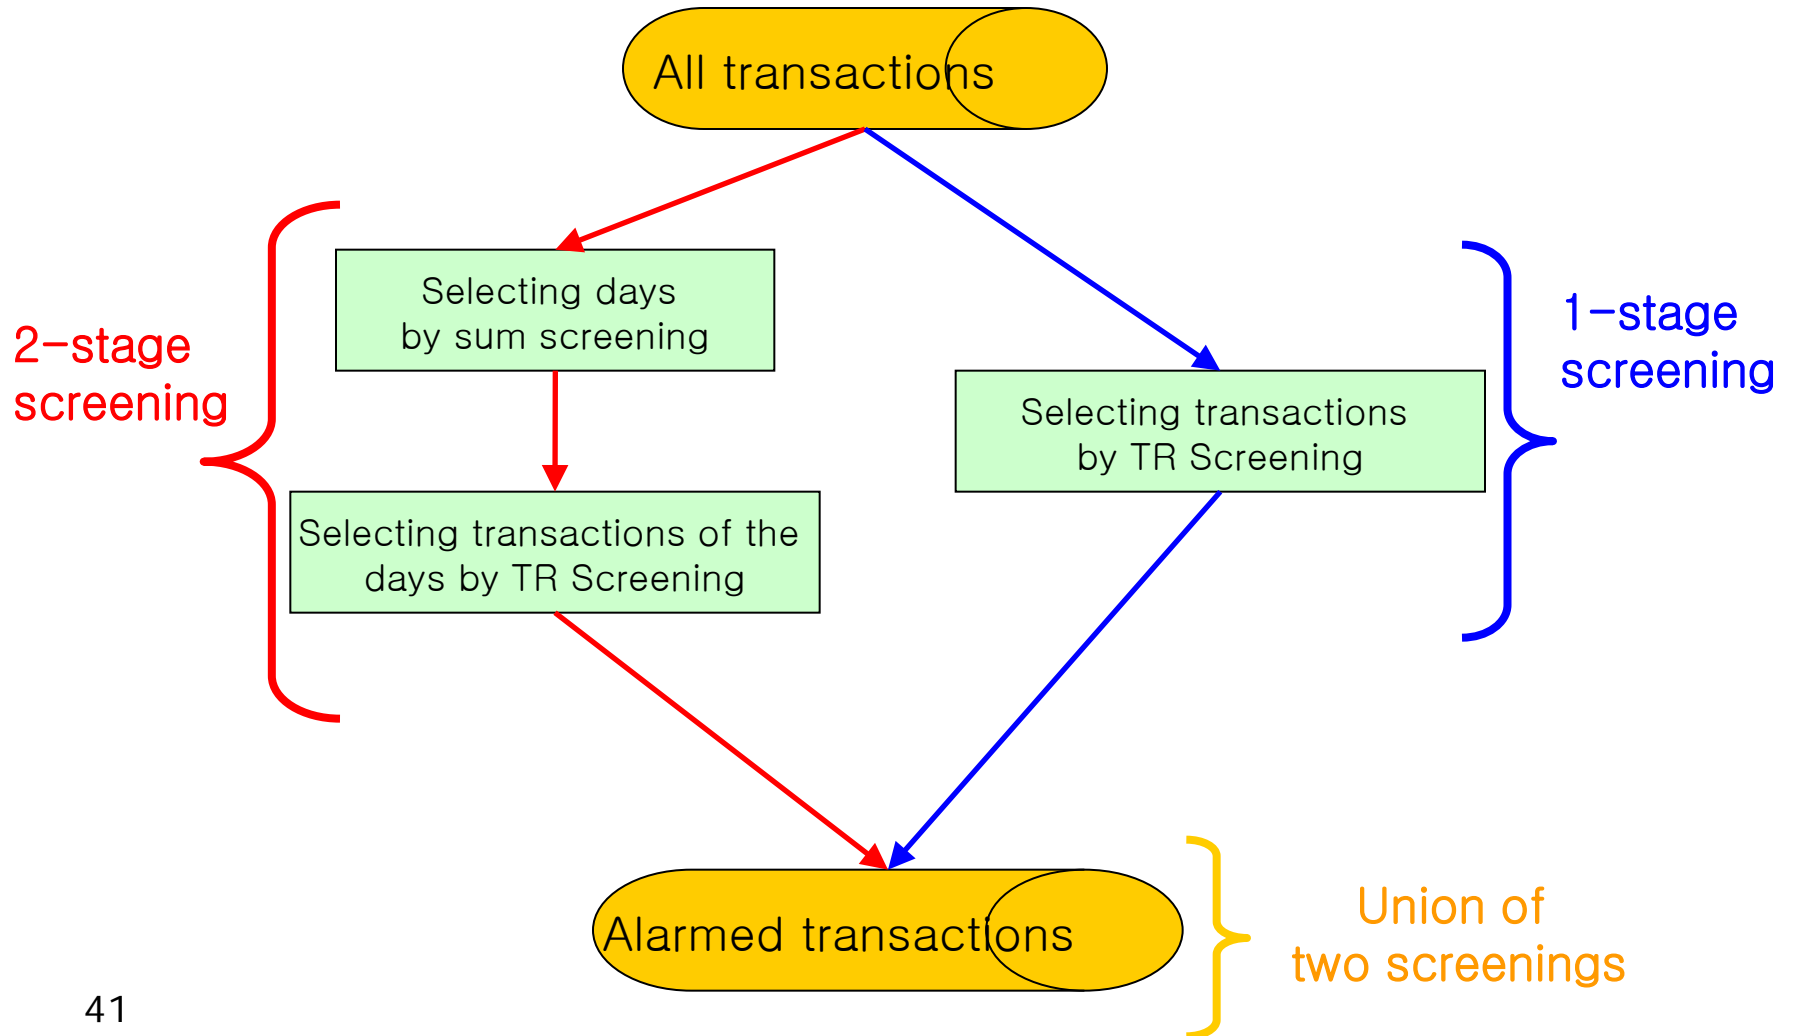

# Rule based selection

## Data Description

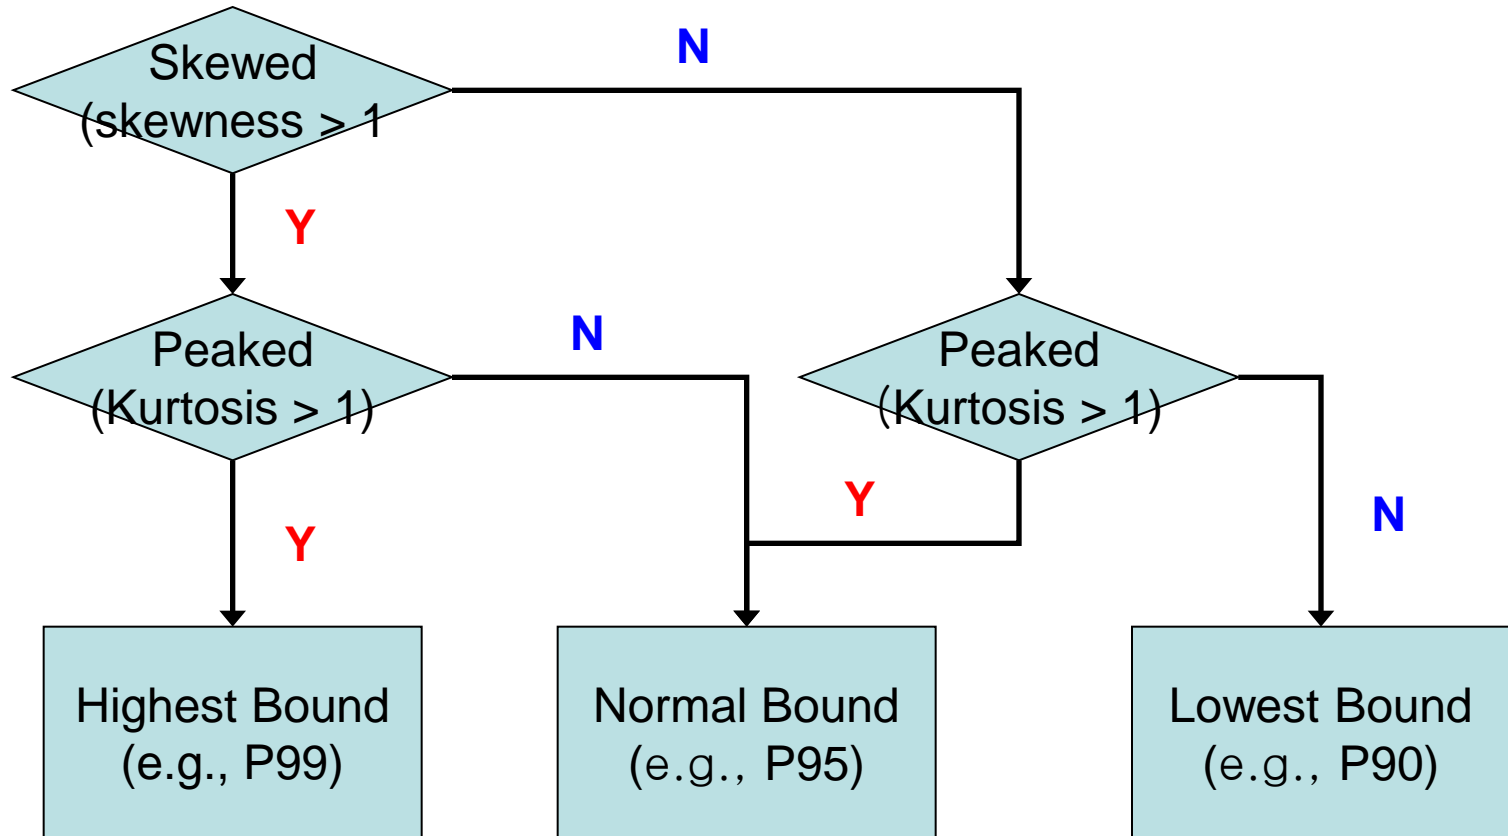

- Summary statistics
  - 16 transitory accounts
  - 17 variables
  - 418,971 transactions
- Data cleaning
  - 418,971: Source data
  - 50: wrong entries (due to wrong data extraction)
  - 18,504: out of date bounds (01/15/08 ~ 11/19/08, 310 days)
  - 400,417: Final data set

**SIEMENS**

Professor Alexander Kogan  
Rutgers Business School

## Pilot Implementation Of CMBPC Systems By Siemens IT Internal Audit

- CARLab approached by Siemens IT internal audit to explore use of CA methodology to streamline audit of SAP system controls at Siemens USA
- Siemens uniquely SAP enabled with 60+ applications in the USA alone
- IT internal audit examines sites on a 2 year cycle: labor intensive, costly
- Internal Audit needed to find resources to take on 404 implementation without increase in headcount
